Its time to upgrade from
SENTINEL INFINITY to MEDIMIZER

Reasons to Upgrade from Sentinel to MediMizer

1. MediMizer features a wide variety of standard reports that are easily accessible. Reports include Safety and Committee compliance, equipment, work order, missing equipment, inspection work- sheets and many more! There is no need to use matching queries or sorting.

2. Automatic scheduling ensures that equipment is scheduled correctly when it is added, allowing flexibility in assigning data entry personnel and ensuring scheduling accuracy.

3. Web links and file links allow you to link to vendor product information or vendor documentation files in just one click.

4. The Quick Entry form saves time by allowing entry of equipment, work orders and task on one screen, eliminating the need for entry on a full form.

5. MediMizer includes a medTester Interface, providing valuable features such as sending and receiving data in one step and checking data before it comes in a Quick Entry form.

6. Data Clean-up is easy and almost all changes are global.

7. The Intranet Web Request Form (optional) gives all levels of facility staff the ability to produce computer generated work requests. Requests are automatically converted into work orders and email messages are sent to the requestors confirming receipt of the work request.

8. Work Orders can be sent to a technician's pager alphanumerically. There's no reason to pick up paperwork.

9. Special Features for Service Organizations or Facilities Departments.

10. Your Sentinel License entitles you to upgrade pricing.
